

X-rays and soft tissue findings

Do you feel competent in diagnosing the soft tissue findings that we often see when taking x-rays of the spine and extremities? If not - this webinar will help you getting there.

INDHOLD:

You often see a lot of soft tissue findings in the thorax and abdomen on thoracic and lumbar studies, such as calcified lymphnodes, atherosclerosis, cholelithiasis, abdominal aneurysm, or enlarged internal organs, while intra and extra articular calcifications show up on studies of extremities. At this webinar we will have a closer look at the most common pathologies and their clinical significance and relevance, and discuss when to act, refer or just take into notice.

MÅL:

Update current and acquire new knowledge on the topic of soft tissue findings on x-rays of the spine and extremities.

Sarah Dion

UNDERVISER:

Sarah Dion. Radiologiekspert.
Underviser fra Årsmødet 2019.
